

UTILITY UPGRADES

Utility Upgrades require submittal of plans for approval by the City Engineer. (See related section for Building Permit Fees; Plan Review Fees (Utility Review)).

Any work that requires the replacement of pavement, such as street cuts, driveway, sidewalk or approaches requires a separate permit for each location. (See related section for Permit Fees Street Restoration.)

Any pavement replacement of sidewalks at intersections requires the proper placement of ADA ramps and yellow detectable inserts. Contact the Engineering Department at 734-324-4551 for specific specifications.
